<b>List of Figures</b>	<b>xi</b>
<b>List of Tables</b>	<b>xv</b>
<b>Preface</b>	<b>xix</b>
<b>Acknowledgments</b>	<b>xxiii</b>
<b>CHAPTER 1</b>	
<b>Interest Rate Risk Modeling: An Overview</b>	<b>1</b>
Duration and Convexity Models	5
M-Absolute and M-Square Models	7
Duration Vector Models	8
Key Rate Duration Models	9
Principal Component Duration Models	10
Applications to Financial Institutions	12
Interaction with Other Risks	14
Notes	15
<b>CHAPTER 2</b>	
<b>Bond Price, Duration, and Convexity</b>	<b>16</b>
Bond Price under Continuous Compounding	16
Duration	20
Convexity	25
Common Fallacies Concerning Duration and Convexity	27
<i>Simple Counter Examples</i>	28
<i>Explanation of the Fallacies</i>	29

<i>Applications to Callable Bonds</i>	31
<i>A New Graph</i>	32
Formulas for Duration and Convexity	36
<i>Duration and Convexity Formulas for Regular Bonds</i>	37
<i>Duration and Convexity Formulas for Annuities and Perpetuities</i>	38
Appendix 2.1: Other Fallacies Concerning Duration and Convexity	41
Notes	42
<b>CHAPTER 3</b>	
<b>Estimation of the Term Structure of Interest Rates</b>	<b>44</b>
Bond Prices, Spot Rates, and Forward Rates	45
<i>The Discount Function</i>	45
<i>Accrued Interest</i>	46
<i>Yield to Maturity</i>	49
<i>Spot Rates versus Forward Rates</i>	49
<i>Term Structure Hypotheses</i>	52
Term Structure Estimation: The Basic Methods	55
<i>Bootstrapping Method</i>	55
<i>Cubic-Spline Method</i>	60
<i>Nelson and Siegel Model</i>	68
Advance Methods in Term Structure Estimation	72
Notes	74
<b>CHAPTER 4</b>	
<b>M-Absolute and M-Square Risk Measures</b>	<b>76</b>
Measuring Term Structure Shifts	77
<i>Shifts in the Term Structure of Zero-Coupon Yields</i>	77
<i>Shifts in Term Structure of Instantaneous Forward Rates</i>	80
M-Absolute versus Duration	84
M-Square versus Convexity	90
<i>Resolving the Convexity/M-Square Paradox</i>	93
<i>Convexity, M-Square, and Ex-Ante Returns</i>	97
<i>Convexity, M-Square, and Immunization Risk</i>	98
Closed-Form Solutions for M-Square and M-Absolute	99
Appendix 4.1: Derivation of the M-Absolute and M-Square Models	103
Appendix 4.2: Two-Term Taylor-Series-Expansion Approach to the M-Square Model	107
Notes	110

<b>CHAPTER 5</b>		
<b>Duration Vector Models</b>		<b>111</b>
The Duration Vector Model		112
<i>Hedging Strategies Based on the Duration Vector Model</i>		126
<i>Closed-Form Formulas for Duration Measures</i>		128
Generalized Duration Vector Models		132
Appendix 5.1: Derivation of the Generalized Duration Vector Models		137
Notes		141
<b>CHAPTER 6</b>		
<b>Hedging with Interest-Rate Futures</b>		<b>143</b>
Eurodollar Futures		144
<i>Futures Prices and Futures Interest Rates</i>		145
<i>Hedging with Eurodollar Futures</i>		148
Treasury Bill Futures		156
<i>Treasury Bill Pricing</i>		156
<i>Futures Prices and Futures Interest Rates</i>		157
Treasury Bond Futures		158
<i>Conversion Factor</i>		160
<i>Cheapest-to-Deliver Bond</i>		161
<i>Options Embedded in T-Bond Futures</i>		163
<i>Treasury Bond Futures Pricing</i>		163
<i>Duration Vector of T-Bond Futures</i>		166
Treasury Note Futures		170
Appendix 6.1: The Duration Vector of the Eurodollar Futures		171
Appendix 6.2: The Duration Vector of the T-Bond Futures		174
Notes		179
<b>CHAPTER 7</b>		
<b>Hedging with Bond Options: A General Gaussian Framework</b>		<b>180</b>
A General Gaussian Framework for Pricing Zero-Coupon Bond Options		181
The Duration Vectors of Bond Options		186
<i>Bounds on the Duration Vector of Bond Options</i>		191
<i>Numerical Simulations</i>		193
<i>Estimation of the Duration Vectors Using             Implied Volatilities</i>		195

The Duration Vector of Callable Bonds	196
<i>Numerical Simulations</i>	199
Estimation of Duration Vectors Using Non-Gaussian Term Structure Models	202
The Durations of European Options on Coupon Bonds and Callable Coupon Bonds	203
<i>Durations of Coupon Bond Options Using Vasicek and     Extended Vasicek Models</i>	207
<b>CHAPTER 8</b>	
<b>Hedging with Swaps and Interest Rate Options Using the     LIBOR Market Model</b>	<b>218</b>
A Simple Introduction to Interest Rate Swaps	219
<i>Day-Count Conventions</i>	221
<i>The Financial Intermediary</i>	222
Motivations for Interest Rate Swaps	223
Pricing and Hedging with Interest Rate Swaps	227
<i>Duration Vector of an Interest Rate Swap</i>	230
Forward Rate Agreements	234
<i>The Duration Vector of an FRA</i>	235
Pricing and Hedging with Caps, Floors, and Collars	
Using the LIBOR Market Model	237
<i>Pricing and Hedging with Interest Rate Caps</i>	239
<i>Pricing and Hedging with Interest Rate Floors</i>	245
<i>Pricing and Hedging with Interest Rate Collars</i>	247
<i>Pricing of Floating-Rate Bonds with Embedded Collars</i>	248
Interest Rate Swaptions	249
<i>The Black Model for Pricing a Payer Swaption</i>	251
<i>The Black Model for Pricing a Receiver Swaption</i>	252
<i>Duration Vectors of Payer and Receiver Swaptions</i>	253
Numerical Analysis	254
Notes	263
<b>CHAPTER 9</b>	
<b>Key Rate Durations with VaR Analysis</b>	<b>264</b>
Key Rate Changes	265
Key Rate Durations and Convexities	268
<i>Key Rate Durations</i>	268
<i>Key Rate Convexities</i>	269

Risk Measurement and Management	273
Key Rate Durations and Value at Risk Analysis	279
Limitations of the Key Rate Model	281
<i>The Choice of Key Rates</i>	281
<i>The Shape of Key Rate Shifts</i>	282
<i>Loss of Efficiency</i>	285
Appendix 9.1: Computing Key Rate Risk Measures for Complex Securities and under Maturity Mismatches	286
<i>Effective Key Rate Risk Measures for Complex     Securities: Using Finite Difference Approximations</i>	286
<i>Maturity Mismatch: Using Interpolations and Mapping     Techniques</i>	288
Notes	293
<b>CHAPTER 10</b>	
<b>Principal Component Model with VaR Analysis</b>	<b>294</b>
From Term Structure Movements to Principal Components	295
Principal Component Durations and Convexities	300
Risk Measurement and Management with the Principal Component Model	304
VaR Analysis Using the Principal Component Model	306
Limitations of the Principal Component Model	308
<i>Static Factors Arising from a Dynamic Volatility Structure</i>	308
<i>Principal Component Analysis: Using Zero-Coupon         Rate Changes or Forward Rate Changes</i>	310
Applications to Mortgage Securities	312
<i>First Stage: Estimation of Principal Components</i>	315
<i>Second Stage: Estimation of Empirical PC Durations</i>	316
Appendix 10.1: Eigenvectors, Eigenvalues, and Principal Components	319
Appendix 10.2: Computing Principal Component Risk Measures for Complex Securities and under Maturity Mismatches	324
Notes	326
<b>CHAPTER 11</b>	
<b>Duration Models for Default-Prone Securities</b>	<b>328</b>
Pricing and Duration of a Default-Free Zero-Coupon Bond under the Vasicek Model	331
The Asset Duration	333

---

Pricing and Duration of a Default-Prone Zero-Coupon Bond:	
The Merton Framework	334
<i>Nawalkha-Shimko et al. Models</i>	336
<i>Numerical Analysis</i>	340
The Duration of a Default-Prone Coupon Bond:	
The First Passage Models	352
<i>Black and Cox Model</i>	353
<i>Longstaff and Schwartz Model</i>	356
Appendix 11.1: Collin-Dufresne and Goldstein Model	371
Notes	376
