List of Figures	xxxiii
List of Tables	xxxvii
CHAPTER 1	
A Simple Introduction to Continuous-Time Stochastic Processes	1
Continuous-Time Diffusion Processes	3
Wiener Process	3
Ito Process	5
Ito's Lemma	7
Simple Rules of Stochastic Differentiation and Integration	9
Obtaining Unconditional Mean and Variance of Stochastic Integrals under Gaussian Processes	9
Examples of Gaussian Stochastic Integrals	11
Mixed Jump-Diffusion Processes	14
The Jump-Diffusion Process	14
Ito's Lemma for the Jump-Diffusion Process	15
CHAPTER 2	
Arbitrage-Free Valuation	17
Arbitrage-Free Valuation: Some Basic Results	18
A Simple Relationship between Zero-Coupon Bond Prices and Arrow Debreu Prices	20
The Bayes Rule for Conditional Probabilities of Events	20
The Relationship between Current and Future AD Prices	21
The Relationship between Cross-Sectional AD Prices and Intertemporal Term Structure Dynamics	22
Existence of the Risk-Neutral Probability Measure	23
Stochastic Discount Factor	28
Radon-Nikodym Derivative	30
Arbitrage-Free Valuation in Continuous Time	31
Change of Probability Measure under a Continuous Probability Density	32

The Girsanov Theorem and the Radon-Nikodym Derivative	34
Equivalent Martingale Measures	35
Stochastic Discount Factor and Risk Premiums	43
The Feynman-Kac Theorem	45

CHAPTER 3**Valuing Interest Rate and Credit Derivatives: Basic Pricing Frameworks****49**

Eurodollar and Other Time Deposit Futures	54
Valuing Futures on a Time Deposit	58
Convexity Bias	60
Treasury Bill Futures	61
Valuing T-Bill Futures	62
Convexity Bias	63
Treasury Bond Futures	64
Conversion Factor	65
Cheapest-to-Deliver Bond	67
Options Embedded in T-Bond Futures	68
Valuing T-Bond Futures	68
Treasury Note Futures	72
Forward Rate Agreements	73
Interest Rate Swaps	74
Day-Count Conventions	76
The Financial Intermediary	77
Motivations for Interest Rate Swaps	78
Pricing Interest Rate Swaps	82
Interest Rate Swaptions	85
Caps and Floors	88
Caplet	90
Floorlet	91
Collarlet	92
Caps, Floors, and Collars	92
Black Implied Volatilities for Caps and Swaptions	93
Black Implied Volatilities: Swaptions	95
Black Implied Volatilities: Caplet	96
Black Implied Volatilities: Caps	97
Black Implied Volatilities: Difference Caps	98
Pricing Credit Derivatives Using the Reduced-Form Approach	98
Default Intensity and Survival Probability	100

Recovery Assumptions	101
Risk-Neutral Valuation under the RMV Assumption	102
Risk-Neutral Valuation under the RFV Assumption	103
Valuing Credit Default Swaps Using the RFV Assumption	104
A New Taxonomy of Term Structure Models	106

CHAPTER 4

Fundamental and Preference-Free Single-Factor Gaussian Models

113

The Arbitrage-Free Pricing Framework of Vasicek	115
The Term Structure Equation	116
Risk-Neutral Valuation	118
The Fundamental Vasicek Model	120
Bond Price Solution	124
Preference-Free Vasicek+, Vasicek++, and Vasicek+++ Models	128
The Vasicek+ Model	128
The Vasicek++, or the Extended Vasicek Model	136
The Vasicek+++, or the Fully Extended Vasicek Model	140
Valuing Futures	144
Valuing Futures under the Vasicek, Vasicek+, and Vasicek++ Models	145
Valuing Futures under the Vasicek+++ Model	150
Valuing Options	153
Options on Zero-Coupon Bonds	153
Options on Coupon Bonds	157
Valuing Interest Rate Contingent Claims Using Trees	161
Binomial Trees	163
Trinomial Trees	165
Trinomial Tree under the Vasicek++ Model: An Example	171
Trinomial Tree under the Vasicek+++ Model: An Example	178
Appendix 4.1. Bond Price Solution Using the Risk-Neutral Valuation Approach under the Fundamental Vasicek Model and the Preference-Free Vasicek+ Model	181
Appendix 4.2. Hull's Approximation to Convexity Bias under the Ho and Lee Model	184

CHAPTER 5**Fundamental and Preference-Free Jump-Extended Gaussian Models 187**

Fundamental Vasicek-GJ Model	188
Bond Price Solution	191
Jump-Diffusion Tree	194
Preference-Free Vasicek-GJ+ and Vasicek-GJ++ Models	201
The Vasicek-GJ+ Model	202
The Vasicek-GJ++ Model	203
Jump-Diffusion Tree	205
Fundamental Vasicek-EJ Model	206
Bond Price Solution	207
Jump-Diffusion Tree	209
Preference-Free Vasicek-EJ++ Model	216
Jump-Diffusion Tree	218
Valuing Futures and Options	218
Valuing Futures	219
Valuing Options: The Fourier Inversion Method	222
Appendix 5.1 Probability Transformations with a Damping Constant	232

CHAPTER 6**The Fundamental Cox, Ingersoll, and Ross Model with Exponential and Lognormal Jumps 235**

The Fundamental Cox, Ingersoll, and Ross Model	237
Solution to Riccati Equation with Constant Coefficients	240
CIR Bond Price Solution	241
General Specifications of Market Prices of Risk	242
Valuing Futures	243
Valuing Options	246
Interest Rate Trees for the Cox, Ingersoll, and Ross Model	248
Binomial Tree for the CIR Model	248
Trinomial Tree for the CIR Model	261
Pricing Bond Options and Interest Rate Options with Trinomial Trees	271
The CIR Model Extended with Jumps	277
Valuing Futures	281
Valuing Options	283
Jump-Diffusion Trees for the CIR Model Extended with Jumps	285
Exponential Jumps	285
Lognormal Jumps	293

CHAPTER 7**Preference-Free CIR and CEV Models with Jumps 303**

Mean-Calibrated CIR Model	305
Preference-Free CIR+ and CIR++ Models	307
A Common Notational Framework	310
Probability Density and the Unconditional Moments	311
Bond Price Solution	313
Expected Bond Returns	315
Constant Infinite-Maturity Forward Rate under Explosive CIR+ and CIR++ Models	316
A Comparison with Other Markovian Preference-Free Models	318
Calibration to the Market Prices of Bonds and Interest Rate Derivatives	320
Valuing Futures	321
Valuing Options	323
Interest Rate Trees	324
The CIR+ and CIR++ Models Extended with Jumps	325
Preference-Free CIR-EJ+ and CIR-EJ++ Models	326
Jump-Diffusion Trees	328
Fundamental and Preference-Free Constant-Elasticity-of- Variance Models	329
Forward Rate and Bond Return Volatilities under the CEV++ Models	331
Valuing Interest Rate Derivatives using Trinomial Trees	334
Fundamental and Preference-Free Constant-Elasticity-of- Variance Models with Lognormal Jumps	338

CHAPTER 8**Fundamental and Preference-Free Two-Factor Affine Models 343**

Two-Factor Gaussian Models	346
The Cannonial, or the A_c , Form: The Dai and Singleton [2002] Approach	347
The A_r Form: The Hull and White [1996] Approach	351
The A_y Form: The Brigo and Mercurio [2001, 2006] Approach	354
Relationship between the $A_{0c}(2)++$ Model and the $A_{0y}(2)++$ Model	356
Relationship between the $A_{0r}(2)++$ Model and the $A_{0y}(2)++$ Model	358
Bond Price Process and Forward Rate Process	359
Probability Density of the Short Rate	360

Valuing Options	361
Two-Factor Gaussian Trees	362
Two-Factor Hybrid Models	371
Bond Price Process and Forward Rate Process	375
Valuing Futures	375
Valuing Options	378
Two-Factor Stochastic Volatility Trees	380
Two-Factor Square-Root Models	391
The A_{1r} Form	391
The A_r Form	397
Relationship between the Canonical Form and the A_r Form	400
Two-Factor “Square-Root” Trees	401
Appendix 8.1 Hull and White Solution of $\eta(t, T)$	408
CHAPTER 9	
Fundamental and Preference-Free Multifactor Affine Models	411
Three-Factor Affine Term Structure Models	414
The $A_{1r}(3)$, $A_{1r}(3)+$, and $A_{1r}(3)++$ Models	414
The $A_{2r}(3)$, $A_{2r}(3)+$, and $A_{2r}(3)++$ Models	419
Simple Multifactor Affine Models with Analytical Solutions	423
The Simple $A_M(N)$ Models	423
The Simple $A_M(N)+$ and $A_M(N)++$ Models	425
The Nested ATSMs	427
Valuing Futures	427
Valuing Options on Zero-Coupon Bonds or Caplets:	
The Fourier Inversion Method	431
Valuing Options on Coupon Bonds or Swaptions: The Cumulant Expansion Approximation	433
Calibration to Interest Rate Caps Data	446
Unspanned Stochastic Volatility	453
Multifactor ATSMs for Pricing Credit Derivatives	455
Simple Reduced-Form ATSMs under the RMV Assumption	456
Simple Reduced-Form ATSMs under the RFV Assumption	466
Appendix 9.1 The Solution of $\eta(t, T, \phi)$ for CDS Pricing Using Simple $A_M(N)$ Models under the RFV Assumption	473
Appendix 9.2 Stochastic Volatility Jump-Based Mixed-Sign $A_N(N)$ -EJ++ Model and $A_1(3)$ -EJ++ Model	475

CHAPTER 10

Fundamental and Preference-Free Quadratic Models 481

Single-Factor Quadratic Term Structure Model	482
Duration and Convexity	486
Preference-Free Single-Factor Quadratic Model	490
Forward Rate Volatility	493
Model Implementation Using Trees	495
Extension to Jumps	496
Fundamental Multifactor QTSMs	499
Bond Price Formulas under $Q_3(N)$ and $Q_4(N)$ Models	503
Parameter Estimates	504
Preference-Free Multifactor QTSMs	506
Forward Rate Volatility and Correlation Matrix	513
Valuing Futures	516
Valuing Options on Zero-Coupon Bonds or Caplets:	
The Fourier Inversion Method	522
Valuing Options on Coupon Bonds or Swaptions: The	
Cumulant Expansion Approximation	525
Calibration to Interest Rate Caps Data	529
Multifactor QTSMs for Valuing Credit Derivatives	535
Reduced-Form $Q_3(N)$, $Q_3(N)+$, and $Q_3(N)++$ Models	
under the RMV Assumption	535
Reduced-Form $Q_3(N)$ and $Q_3(N)+$ Models under the	
RFV Assumption	541
Appendix 10.1 The Solution of $\eta(t, T, \phi)$ for CDS Pricing	
Using $Q_3(N)$ Model under the RFV Assumption	545

CHAPTER 11

The HJM Forward Rate Model 549

The HJM Forward Rate Model	550
Numerical Implementation Using Nonrecombining Trees	554
A One-Factor Nonrecombining Binomial Tree	555
A Two-Factor Nonrecombining Trinomial Tree	563
Recursive Programming	567
A Recombining Tree for the Proportional Volatility HJM	
Model	570
Forward Price Dynamics under the Forward Measure	571
A Markovian Forward Price Process under the	
Proportional Volatility Model	573
A Recombining Tree for the Proportional Volatility	
Model Using the Nelson and Ramaswamy	
Transform	574

CHAPTER 12	
The LIBOR Market Model	581
The Lognormal Forward LIBOR Model (LFM)	583
Multifactor LFM under a Single Numeraire	586
The Lognormal Forward Swap Model (LSM)	589
A Joint Framework for Using Black's Formulas for Pricing Caps and Swaptions	593
The Relationship between the Forward Swap Rate and Discrete Forward Rates	594
Approximating the Black Implied Volatility of a Swaption under the LFM	595
Specifying Volatilities and Correlations	598
Forward Rate Volatilities: Some General Results	598
Forward Rate Volatilities: Specific Functional Forms	602
Instantaneous Correlations and Terminal Correlations	606
Full-Rank Instantaneous Correlations	610
Reduced-Rank Correlation Structures	617
Terminal Correlations	621
Explaining the Smile: The First Approach	621
The CEV Extension of the LFM	622
Displaced-Diffusion Extension of the LFM	624
Unspanned Stochastic Volatility Jump Models	627
Joshi and Rebonato [2003] Model	628
Jarrow, Li, and Zhao [2007] Model	629
An Extension of the JLZ Model	634
Empirical Performance of the JLZ [2007] Model	635
References	645
Index	657
